

## Covid-secure events for Planners

In any area:

- Where a big turn-out may be expected, consider the possibility of two Starts, to increase the maximum capacity ( max 10 starters per 15 minute window per start).
- Where possible position the Start (s) so they are visible from Parking and/or Registration, so that competitors can more accurately judge how long it will take, and thereby avoid queueing.
- A Start may take up more space ( width ) than usual, so avoid narrow paths, even if this means a taped route for White and Yellow.
- Avoid pinch points ( narrow paths, gates, stiles ) as far as possible, especially where runners will go through in both directions.

In areas open to the public or with significant numbers of visitors:

- Position Start and Finish in areas with few visitors.
- Avoid courses going through/near areas where gatherings of the general public might occur.
- Avoid pinch points ( as above ) as far as possible, especially where the public also use them.
